Directions for using the Cross Index Plat

Section, quarter and sixteenth corners will be marked with a dot at the corner location. The alpha–numeric coordinate number is then determined for the intersection of the two lines. A corner that applies to two or more townships shall be filed under all that apply by the use of photo copies.

Closing corners will be indexed under the township in which they control ownership. For 1/64, 1/256, 1/1024 and non-aliquot corners lying between grid designations, mark the appropriate grid area with a dot and use the index code to the north and west (local systems may be used if the method is approved by the County Surveyor or Clerk and a written description of its use is filed in the front of each book of certificates).
